

07 August 2020

ATTENDEES

Seán O'Callaghan, Viktor Zamaraev

SYNOPSIS

Weekly meeting.

NOTES

Try to connect points on the slice plot for better visibility of edges. Edges should not overlap, they are disjoint. For the library showcase, use the Transport for London public API to generate a temporal data-set. This API allows for 'easy' access to real-world data from a temporal network. Develop a client to generate nodes & edges from lines, stations and journeys.

ACTION ITEMS

Build a client to interact with the TFL Restful API.
